1. Proposed system

1.1 project profile

Project Title	Hotel booking service
Project Definition	The project greatly simplifies the booking process of hotels by filters like different states, types, city, etc.. .users can book hotels, make payments, etc.
Project Type	Web Bases Application
Front-end Tool	Visual Studio code
Front-end Technology	PHP
Back-end Tool	Mysql
Development Tool	HTML, CSS,javascript
Project Internal Guide	Mrs.parul patel
Project External Guide	
Project Duration	3 Months
Submitted By	Mr. Rishi patel
Submitted To	J. P. Dawer Institute of Information Science & Technology, surat

1.2 Scope :

1) Admin :-

- admin can login
- admin can add hotels,room types,cities etc..

- admin can update hotel details,prices etc..
- admin can manage user inquiries,hotel bookings and other services
- admin can manage FAQs
- Show reviews and Response to user's query

2) User :-

- user can sign up and log in
- Reset password
- user can write inquiry for booking hotels
- user can search hotels based on states and cities.
- user can select city,state,price,type of rooms(deluxe room,family room,couple room etc)
- user can give reviews
- user can book hotels
- user can pay online or offline
- user can cancel booking
- user can check terms and condition.

1.3 Objectives :

- A hotel management system aims to streamline and optimize the management of hotel-related activities and services. This

includes managing bookings, reservations, customer service, and financial transactions.

- The system should provide a platform for operators to manage their business operations effectively while providing a seamless and enjoyable experience for customers.

2. System Environment

2.1 Hardware environment

- Desktop Computer / Laptop with a modern operating system.

- Most current computers and laptops have high enough specifications to be used to create website.
- A server with sufficient processing power, storage and memory to handle website traffic.
- Templates/API
 - Some in-built designing templates are available to make site responsive and attractive. In our website i have used Zegva admin and ThemeForest user template respective.
 - There are few API's available that helps in add on functionalities.
- External Hard Drive for Backing up Purpose.
- A database server, MySQL Server for storing and retrieving data.
- Server to Host Website.
- The Server should also have a reliable internet connection with adequate bandwidth.

2.2 Software environment

- Operating system
 - Any windows version would be required.
- Browser Requirement
 - A compatible browser support is essential in order to execute or run the website.

Operating Environment

This proposed software will be used in the Windows platform in the A version of windows 7, windows 8 and Windows 10.

Design and Implementation Constraints

This system shall be a based application system running in a windows environment. The system shall be developed using PHP and MySQL server.

Hardware interfaces

This System doesn't require any hardware interface. The one used is monitor, keyboard and mouse.

The system should have these hardware requirements:

- Memory: 512MB or above
- Hard Disk Drive: 40Gb or above
- Processor: Intel Pentium3 3.2Ghz or above

Software Interfaces

- Operating System: Windows
- Front End: HTML, JS, CSS, Bootstrap
- Back End: MySQL, PHP

Communication is done through internet and intranet.

3. System Planning

3.1 Feasibility Study

- A feasibility study for a tour hotel booking management system involves assessing the practicality and viability of developing and implementing a system that facilitates the management of various hotel booking. The study typically includes evaluating economic feasibility, Technical feasibility, and Operational feasibility. Here's a breakdown of each aspect:

1. Economical Feasibility:

- Economic feasibility involves analyzing the financial viability of the hotel booking management system. It includes estimating the costs associated with system development, implementation, ongoing maintenance, and support. Additionally, potential benefits such as increased efficiency, cost savings, and revenue generation should be considered to determine if the system is economically feasible.

2. Technical Feasibility:

- As our system is web-bases application, the main tools and technology used are,
 - HTML
 - CSS
 - jQuery
 - MySQL Server
 - Bootstrap
 - As known these technologies are open Source and easy to learn. The technical skills required are manageable.

3. Operational Feasibility:

- Operational feasibility assesses the system's compatibility with existing customer/tourism operations and processes. It involves evaluating how the system will integrate into daily operations, its impact on stakeholders (e.g., service providers, customers), and the willingness of stakeholders to adopt and utilize the system. Operational challenges and potential benefits such as improved scheduling, resource allocation, and customer satisfaction should be considered.

4.System Analysis

4.1 System Architecture

- **Admin Side:**

- **User Side:**

4.2 Software Requirement Specification

1. Overall Description :

1.1 User Classes and Characteristics

The admin of the company and the customer will be the main users of the system. The System is also designed to be user-friendly.

1.2 Operating Environment

This proposed software will be used in Windows platform in the version of Windows 7, windows 8, and Windows 10.

1.3 Design and Implementation Constraints

This system shall be a based application system running in a windows

environment. The system shall be developed using SQL server.

A person who has no knowledge of computers will find it difficult to understand the system. But with a little knowledge it will be very easy to handle the project.

1.4 General Constraints

- The System must be delivered by deadline.
- The System must be user-friendly.

1.5 Assumption and Dependencies

It is assumed that compatible computers will be available before the system is installed and tested.

2. System Features and Requirements :

2.1 Functional Requirements

The System should have total two modules are Admin Module user module.

2.1.1 Admin Module :

- Admin can login using email and password.
- Admin can add , delete , update the data of hotels
- Admin can see the data of user via booking.
- Admin can see review and user enquiry
- Admin will response to user according to their query about services.
- Admin can manage and see cancellation.

2.1.2 User Module :

- Users can see the packages according to state, city, room type and hotels, FAQs, and details about website.
- User can add hotels.
- Users can book services.
- User can pay online.
- Users can give reviews.

2.2 External Interface Requirements:

2.2.1 User Interfaces :

The user interface is designed in php. The developer will have to study the designing of the project. The user will get very user friendly web page which will be very easy to work with.

2.2.2.Hardware interfaces :

This System doesn't require any hardware interface. The one used is monitor, keyboard and mouse.

The system should have these hardware requirements:

- Memory : 512MB or above
- Hard Disk Drive : 40Gb or above
- Processor : Intel Pentium3 3.2Ghz or above

2.2.3 Software Interfaces :

- Operating System : Windows
- Front End : HTML, JS, CSS, Bootstrap, jQuery
- Back End: SQL, php

2.2.4 Communication Interfaces :

Communication is done through internet .

2.2.5 System Features :

- Authentication for different users.
- Real-time validation of all fields and database to prevent errors.
- LAN compatible.
- Compatible with any platform.

2.3 Non-Functional Requirements

2.3.1 Performance requirements :

System manages facilities required by the users quickly and easily .It offers to employee through online.

2.3.2 Safety Requirements/Specification :

- In case the admin forgets or loses Passwords, the repair functionality helps by choosing “Forget password” option in the main login page.

-To avoid this kind of situations, backups can be done regularly.

2.3.3 Security Requirements/Specification :

This system is provided with authentication feature. So only the legitimate users are allowed to use the application. If the legitimate user's share the authentication information then the system is open to outsiders.

2.3.4 Software Quality Attributes :

- **Reliability** : Good validations of user inputs will be done to avoid incorrect storage of records.
- **Maintainability** : During the maintenance stage ,SRS document can be referred for any validations.
- **Portability** : This system can be installed in any personal computers supporting windows operating system platform.

4.3 Entity Relationship Diagram

4.4.1 context level dfd

4.4.2 LEVEL-1 dfd(admin)

4.2 LEVEL-1 dfd(user)

4.4.3 LEVEL-1 dfd(visitor)

4.4.2.1 LEVEL-2 admin(hotels)

4.4.2.2 LEVEL-2 admin(state)

4.4.2.3 LEVEL-2 admin(city)

4.4.2.4 LEVEL-2 admin(room type)

4.4.2.5 LEVEL-2 admin(no of rooms)

4.4.2.6 LEVEL-2 admin(FAQs)

4.4.2.7 LEVEL-2 admin(booking)

4.4.2.7 LEVEL-2 admin(review)

4.4.2.8 LEVEL-2 admin(cancellation)

4.4.2.9 LEVEL-2 user(booking)

4.4.2.10 LEVEL-2 user(review)

4.4.2.11 LEVEL-2 user(cancellation)

4.5 Data dictionary

1) Admin_tb

Column	datatype	size	example	description
admin_id	int	20	1,2...	Primary key
admin_name	varchar	50	rishi	Name of admin
email	varchar	50	rishipatel1@gmail.com	Email of admin
password	varchar	50	****	***
image	varchar	100		Image of admin

2) city_tb

field	datatype	size	example	description
city_id	Int	50	1,2...	Primary key
City_name	varchar	100	surat	Name of city
state_id	int	100	1,2...	Foreign key (state)

3)faqTb

field	datatype	size	example	description
queid	int	100	1,2..	primary key
que	Varchar	MAX	How do I make a booking?	frequently ask questions
ans	Varchar	MAX	Just log on to our website , click on create trip and choose your preferred flight and hotel...	answers

4) State_tb

field	datatype	size	example	description
state_id	int	100	1,2,3..	primary key
state_name	Varchar	MAX	Himachal pradesh	name of state

5) Booking tb

field	datatype	size	example	description
booking_id	Int	100	1,2..	primary key
username	varchar	100	kirti	name of user
bemail	varchar	MAX	Kirti1@gmail.com	email of user

bphone	Varchar	100	8898965023	user's number
bcity	varchar	100	kerala	city of user
paymentkey	varchar	100		Payment key
paystatus	varchar	50	pending	Status of payment
Pay type	varchar	100	Online/offline	Type of payment
hid	int	100	1,2,3,4..	Id of the hotel
Check in_date	Date	10	12/04/2024	Date of the check in
Check out date	date	10	16/04/2024	Date of check out
Total amount	int		15000	Total amount of hotel
uid	int	10	1,2,3..	User id

6) Cancellation

field	datatype	size	example	description
booking_id	Int	100	1,2..	foreign key
bdate	date	12	12/3/2023	Date of booking
cdate	date	12	14/3/2023	Date of cancellation

cid	int	10	1,2,3...0	Primary key
refundstatus	Varchar	MAX	pending or done	Status of refund

7) Facility_master

field	datatype	size	example	description
fdescription	varchar	100	Hotel provides this..	Hotel description
fid	int	100	1,2,3..	Primary key
fname	varchar	50	food	Facility name

8) Coverpic_tb

field	datatype	size	example	description
hid	Int	100	1,2..	foreign key
image	varchar	MAx		Image
pid	int	100	1,2..	Primary key

9) Hotel_master

field	datatype	size	example	description
hid	Int	100	1,2..	primary key
City_id	int	100	1,2..	

hname	varchar	100	The royal hotel	Name of hotel
location	varchar	max	mumbai	Location of hotel
photos	varchar	100		Photos of hotel
pincode	int	100	395004	Pincode of city
State_id	int	100	1,2..	Foreign key
street	varchar	100	mazgaon	Strret of city

10) Hotel_facility_master

field	datatype	size	example	description
fid	Int	100	1,2..	foreign key
hfid	int	100	1,2..	Primary key
hid	int	100	1,2..	Foreign key

4.7 Use case
